

## Supplementary Materials for

### This file includes:

**Table S1.** Description of Type 2 diabetes, Coronary artery disease, gut microbiota and metabolite.

**Table S2.** Results of a bidirectional Mendelian randomization analysis of type 2 diabetes ( $P < 5 \times 10^{-8}$ ) and coronary artery disease ( $P < 5 \times 10^{-8}$ ).

**Table S3.** MR Results of metabolites on T2D.

**Table S4.** MR Results of metabolites on CAD.

**Table S5.** Particulars of SNPs used in MR analyses of gut microbiota.

**Table S6.** MR Power calculation for detecting significant ( $P < 0.05$ ) causal effect of gut microbiota on the risk of T2D/CAD, and T2D/CAD on the risk of gut microbiota.

**Figure S1.** Leave-one-out analysis of inverse-variance weighted (IVW) estimates between genetically determined gut microbiota traits ( $p < 1 \times 10^{-5}$ ) and Type 2 diabetes (T2D), as well as coronary artery disease (CAD).

**Figure S2.** Leave-one-out analysis of inverse-variance weighted (IVW) estimates between genetically determined type 2 diabetes (T2D) traits ( $P < 5 \times 10^{-8}$ ), as well as coronary artery disease (CAD) traits ( $P < 5 \times 10^{-8}$ ), and gut microbiota.

**Figure S3.** Leave-one-out analysis of inverse-variance weighted (IVW) estimates between genetically determined metabolites traits ( $p < 1 \times 10^{-5}$ ) and Type 2 diabetes (T2D), as well as coronary artery disease (CAD).

**Additional information 1.** Harmonized data.

**Additional information 2.** Results of MR analysis.

**Table S1. Description of Type 2 diabetes, Coronary artery disease, gut microbiota and metabolite.**

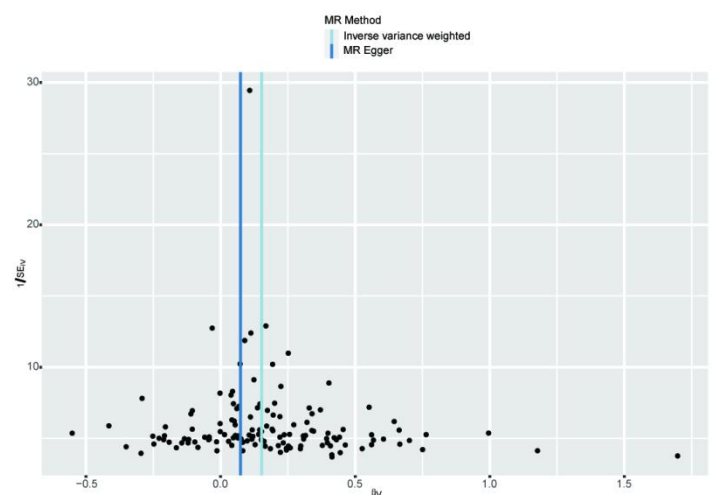

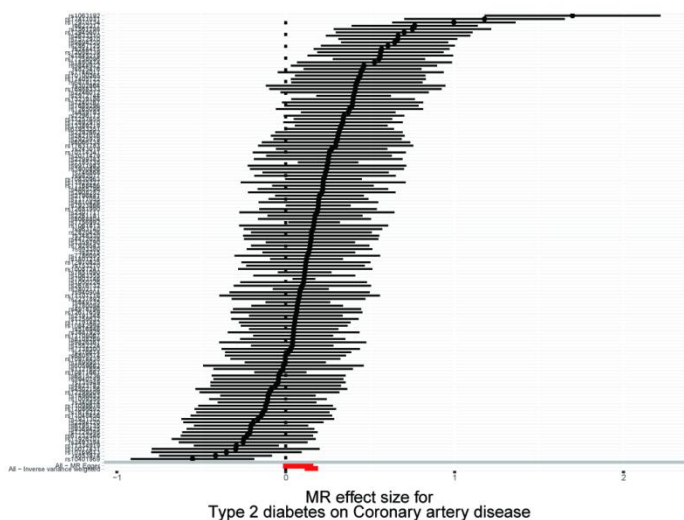

Traits	Consortium	First author	Sample size	Populations	Journal	Year	Download link
Type 2 diabetes	NA	Xue A	655,666 (61,714 cases / 1,178 controls)	European ancestry	Nat Commun.	2018	<a href="https://gwas.mrcieu.ac.uk/datasets/ebi-a-GCST006867/">https://gwas.mrcieu.ac.uk/datasets/ebi-a-GCST006867/</a>

<sup>a</sup> MiBioGen consortium curated and analyzed genome-wide genotypes and 16S fecal microbiome data from 18,340 individuals (24 cohorts). Twenty cohorts included samples of single ancestry, namely European (16 cohorts; n= 13,266), Middle Eastern (1 cohort; n= 481), East Asian (1 cohort; n= 811), American Hispanic/Latin (1 cohort; n= 1,097) and African American (1 cohort; n= 114), whereas four cohorts included samples from multiple ancestries (n = 2,571).

**Table S2. Results of a bidirectional Mendelian randomization analysis of type 2 diabetes ( $P < 5 \times 10^{-8}$ ) and coronary artery disease ( $P < 5 \times 10^{-8}$ ).**

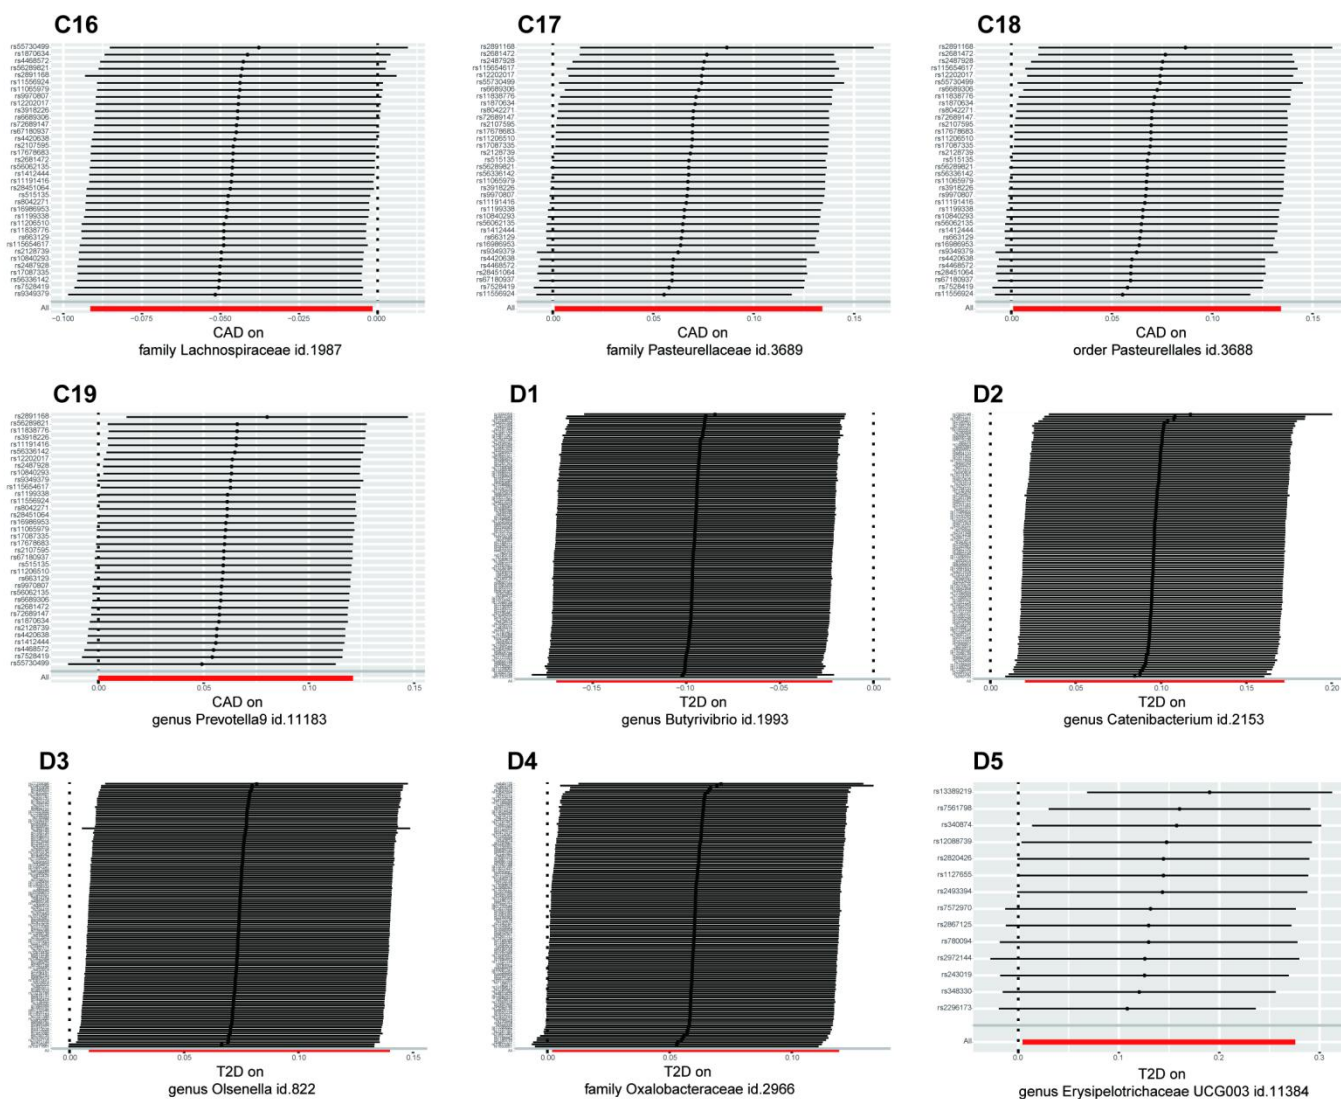

**Figure S1. Leave-one-out analysis of inverse-variance weighted (IVW) estimates between genetically determined gut microbiota traits ( $p < 1 \times 10^{-5}$ ) and Type 2 diabetes (T2D), as well as coronary artery disease (CAD).**

Black dots indicate the IVW estimates (raw beta) after leaving a SNP in the calculation. The red dots indicate the pooled IVW estimates (raw beta). The horizontal line indicates the range of 95% confidence intervals.

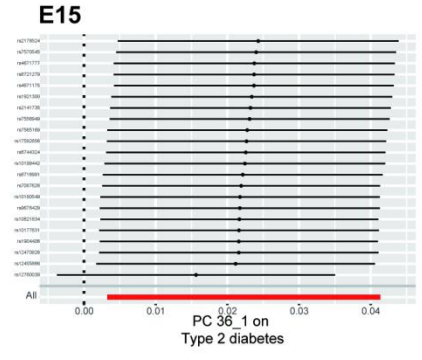

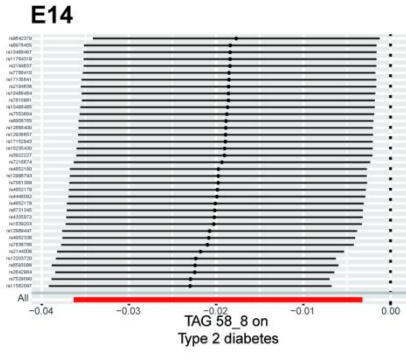

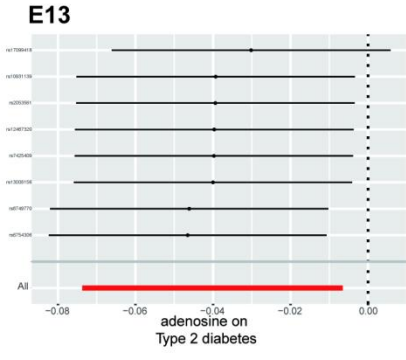

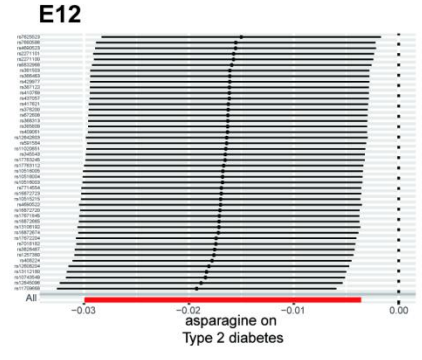

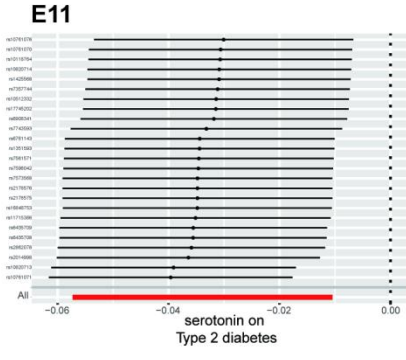

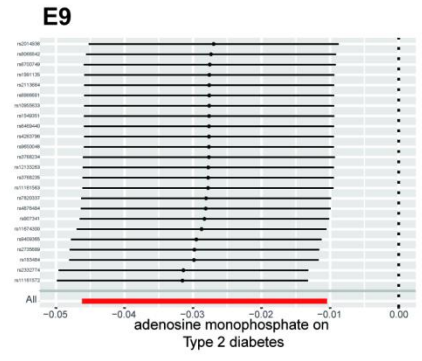

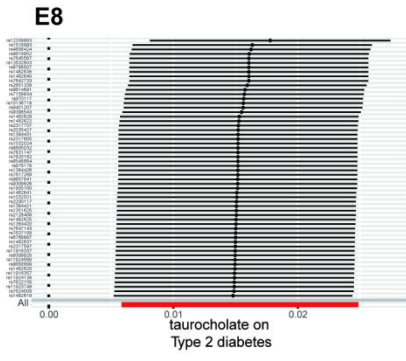

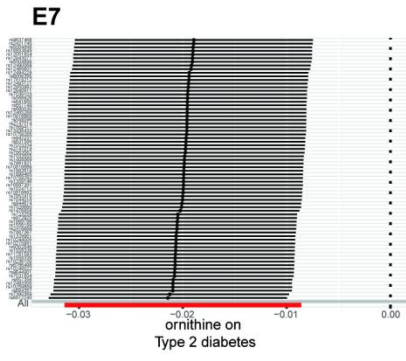

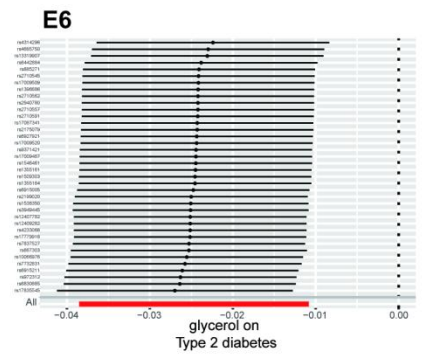

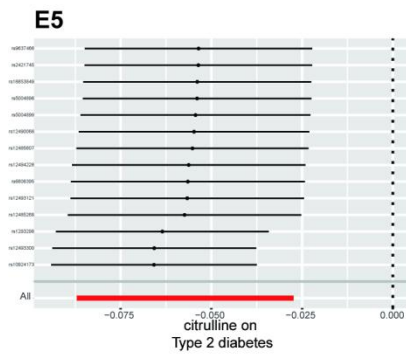

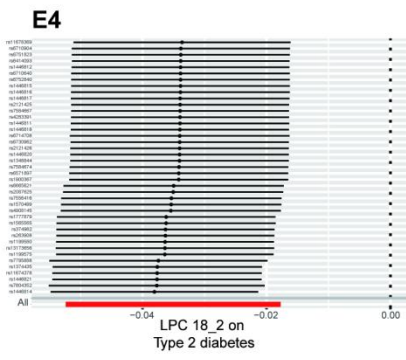

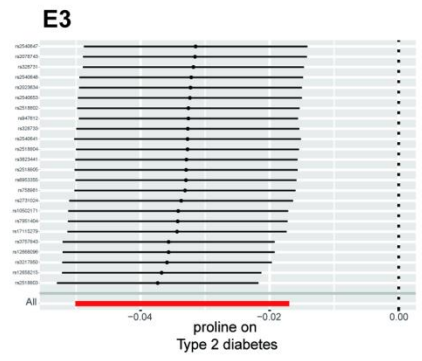

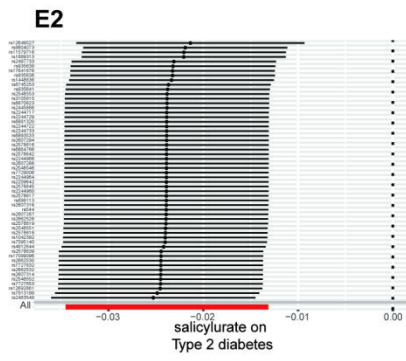

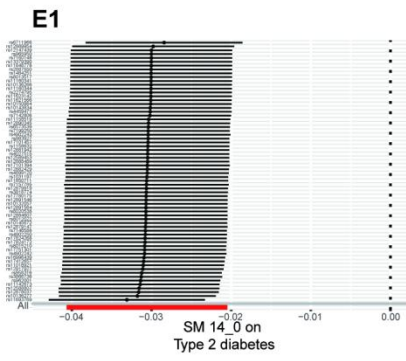

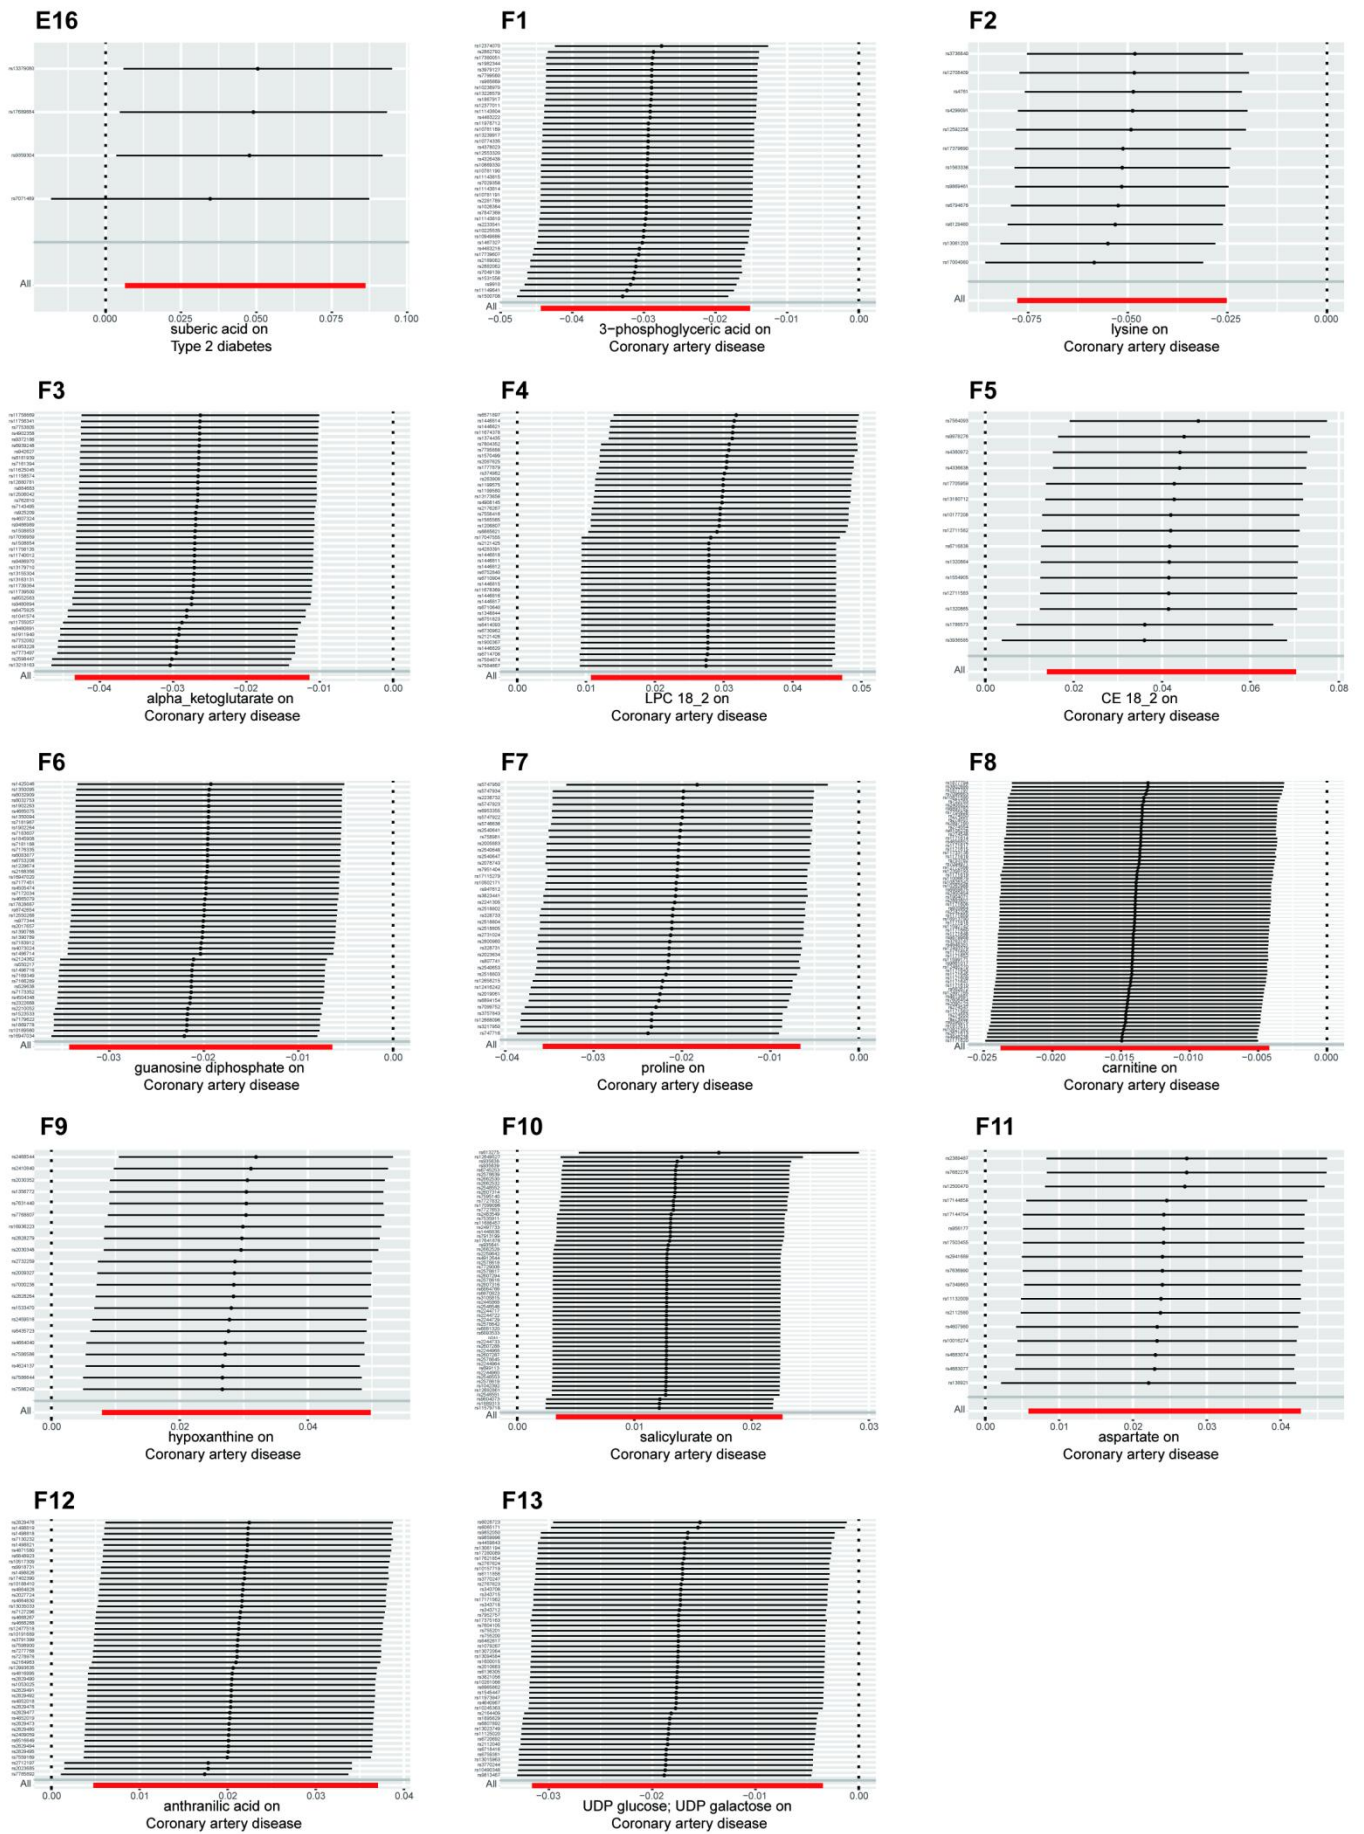

**Figure S2. Leave-one-out analysis of inverse-variance weighted (IVW) estimates between genetically determined type 2 diabetes (T2D) traits ( $P < 5 \times 10^{-8}$ ), as well as coronary artery disease (CAD) traits ( $P < 5 \times 10^{-8}$ ), and gut microbiota.**

Black dots indicate the IVW estimates (raw beta) after leaving a SNP in the calculation. The red dots indicate the pooled IVW estimates (raw beta). The horizontal line indicates the range of 95% confidence intervals.

**Figure S3.** Leave-one-out analysis of inverse-variance weighted (IVW) estimates between genetically determined metabolites traits ( $p < 1 \times 10^{-5}$ ) and Type 2 diabetes (T2D), as well as coronary artery disease (CAD). Black dots indicate the IVW estimates (raw beta) after leaving a SNP in the calculation. The red dots indicate the pooled IVW estimates (raw beta). The horizontal line indicates the range of 95% confidence intervals.
