Supplementary Figure 1. Effect of CGT on mRNA expressions of CD44 and PD-L1 in SKOV3 cells

After treatment of CGT for 24 h, the total RNA was collected from SKOV3 cells (4×10^5 cells of 60 mm dish). RT-qPCR was performed to analyze the mRNA expressions of (A) CD44 and (B) PD-L1. The symbol ‘*’ indicates $P < 0.05$; ns, not significant.

23

24 **Supplementary Figure 2. Effect of CGT on tumor spheroid formation of SKOV3**
25 **shLuc and shITGAVB3 cells**

26 SKOV3 shLuc and shITGAVB3 cells (1×10^3 cells/well of 96-well dish) were seeded
27 onto ultra-low attachment 96-well plates. After 11 days incubation for spheroid
28 formation, the areas of spheroids were determined. Data show the relative spheroid
29 volume, and the area of spheroid of SKOV3 shLuc cells was set at 100%. The symbol
30 'ns' indicates not significant.
